**MEMORANDUM TO THE COMMITTEE OF COUNSEL**Re: California Proposition 65

At its meeting on May 5, 1994, the Developmental and Reproductive Toxicant (DART) Identification Committee of the Proposition 65 Science Advisory Board directed the California Office of Environmental Health Hazard Assessment (OEHHA) to prepare an evaluation of environmental tobacco smoke (ETS) as a possible reproductive toxicant for consideration at the next DART Committee meeting.

The DART Committee also directed OEHHA, in consultation with the California Attorney General, to provide advice to the Committee at its next meeting with respect to whether the Committee is authorized to consider effects from post-natal exposure in deciding whether to list a substance as a reproductive toxicant.

Enclosed are copies of the agenda for the May 5 meeting and the materials distributed in connection with ETS. Dates have not been set for completion of the OEHHA evaluation of ETS and subsequent DART Committee meeting. DART Committee meetings are ordinarily held twice a year.
